

**Department of Computer Technology****Vision Statement of the Department.**

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Session	2026-27	Course Name	Web Technology Lab
Semester	3	Course Code	23CT1301
Roll No	A29	Name of Student	Unnati Goyanka

Practical Number	3
Course Outcome	1. Understand various internet technologies. 2. Design the web pages using HTML and CSS. 3. Implement the XML technology to store the data. 4. Develop the interactive web pages using JavaScript.
Aim	Develop and demonstrate the usage of inline, internal and external style sheet using CSS.
Problem Definition	To design a basic web page and apply CSS using three different styling methods: inline CSS, internal CSS, and external CSS. The webpage should demonstrate how each method can be used to modify properties such as text color, font size, background color, alignment, and other visual characteristics of HTML elements.
Theory (100 words)	CSS (Cascading Style Sheets) is used to control the appearance and presentation of HTML web pages. CSS can be applied to an HTML document in three ways: inline, internal, and external. Inline CSS is written directly inside an HTML element using the style attribute and affects only that element. Internal CSS is written inside the <style> tag within the <head> section and can style multiple elements on the same page. External CSS is written in a separate .css file and connected to an HTML document using the <link> tag. External CSS is useful for applying consistent styles across multiple web pages.

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Procedure and Execution (100 Words)	Step for Implementation: Open a text editor such as Notepad or Visual Studio Code. Create an HTML file and save it with the style.html extension. Create a separate CSS file and save it with the style.css extension. Apply inline CSS to an HTML element using the style attribute. Add internal CSS inside the <style> tag in the <head> section. Write different styles in the external CSS file. Link the external CSS file to the HTML document using the <link> tag. Use different colors, fonts, sizes, and alignments to observe the effect of each CSS method. Save both files. Open the HTML file in a web browser and verify the output.
