

Department of Computer Technology

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Session	2026-27	Course Name	Web Technology Lab
Semester	3	Course Code	23CT1301
Roll No	A29	Name of Student	Unnati Goyanka

Practical Number	
Course Outcome	1. Understand various internet technologies. 2. Design the web pages using HTML and CSS. 3. Implement the XML technology to store the data. 4. Develop the interactive web pages using JavaScript.
Aim	To create a web form using HTML form tags for collecting user information such as name, email, gender, date of birth, course, address, and other details.
Problem Definition	Design and develop an HTML-based Student Registration Form that allows a user to enter personal and academic information. The form should demonstrate the use of various HTML form elements such as text fields, email fields, password fields, radio buttons, checkboxes, drop-down lists, text areas, and submit/reset buttons.
Theory (100 words)	HTML forms are used to collect information from users through a web page. The <code><form></code> tag acts as a container for different input controls. The <code><input></code> tag is used to create text boxes, email fields, passwords, radio buttons, checkboxes, and buttons. The <code><label></code> tag provides a description for each input field. The <code><select></code> and <code><option></code> tags are used to create a drop-down list, while the <code><textarea></code> tag allows users to enter multi-line information. The action attribute specifies where the form data is submitted, and the method attribute specifies how the data is sent. HTML forms are commonly used for registration, login, feedback, and data collection.

Department of Computer Technology

Vision Statement of the Department.

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission Statement of the Department.

To nurture computer engineering professionals by offering Dynamic learning environment that encourages problem-solving using emerging technology, National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration & Holistic, ethical and sustainable development for lifelong success.

Procedure and Execution (100 Words)	Step for Implementation: Open a text editor such as Notepad. Create a new file and save it with the form.html extension. Add the basic HTML structure using <html>, <head>, and <body> tags. Create a form using the <form> tag. Add appropriate <label> and <input> elements for student information. Use radio buttons to select gender and checkboxes to select interests. Use <select> and <option> to create a course drop-down menu. Add Submit and Back buttons. Save the file and open it in a web browser to execute and verify the form.
Code:	<pre>: <!DOCTYPE html> <html> <head> <title>STUDENT REGISTRATION FORM</title> </head> <body> <h1>REGISTRATION FORM</h1> <form> <label>Full name:</label>
 <input type="text" id="name">

 <label>Email:</label>
 <input type="email" id="email">

 <label>Password:</label>
 <input type="password" id="password">

 <label>Phone number:</label>
 <input type="number" id="number">

 </form> </body> </html></pre>
